

ABSTRACT

The present invention provides a drug dispenser which can easily align the drugs when filling it with the drugs. In a drug dispenser in which a lowermost drug of a plurality of drugs 100 stacked in a vertical direction and contained in a drug case 1 is pushed out in a horizontal direction to dispense it, a door 7 is provided on the front surface of the drug case 1. A drug aligning means (second door) 11 is provided on the inner surface of the door 7, the drug aligning means 11 pushing the front ends of the plurality of drugs 100 contained in the drug case 1 to align the rear ends thereof when the door 7 is closed.
